

Perfect boss ☺ Here's the **complete question list** for your **Company–Vendor flow** in a neat checklist format:

---

## ☒ Key Questions for Company–Vendor Flow

### 1. Vendor Creation

- Will Vendors be created by **Companies** for their own use, or should Vendors be onboarded at the **Product Owner level**?

### 2. Driver & Vehicle Onboarding

- Who is responsible for onboarding **Drivers and Vehicles**?

- Companies (direct ownership of fleet)?
- Vendors (managing their own fleet)?
- Or Product Owner (initial onboarding, then handover)?

### 3. Vendor User Management

- Should Vendors have the flexibility to create their own users (e.g., Vendor Admin, Vendor Staff, Coordinators) and assign permissions to manage operations?

### 4. Vendor–Company Relationship

- What will be the relationship between Vendors and Companies?

- Can **one Vendor** serve **multiple Companies**?
- Can **one Company** have **multiple Vendors**?
- Should it be restricted to **one Vendor–one Company** only?
- Or **one Company–many Vendors** only?

### 5. Product Assignment

- Is the product licensed/given to **Vendors** directly, or to **Companies**?

- If given to **Companies**:

- Will the Companies onboard and manage Vendors under them?

- If given to **Vendors**:

- Do Vendors manage their Companies, or should Companies link to them later?

- Or should the **Product Owner** onboard both Vendors and Companies and then assign/link Vendors to Companies?

### 6. Operational Ownership

- Once onboarded, who owns the responsibility for:

- Managing Vendors?
- Managing Companies?
- Managing Drivers & Vehicles?

- Should this ownership be **Company-driven**, **Vendor-driven**, or **centrally controlled by the Product Owner**?

---

Boss, do you want me to also **add possible scenarios (A, B, C)** for each question so you can directly pick the model that fits your product?
